

## IS IT OVER YET?

One thing we do know for certain... 2009 is almost behind us!

Unique Machine & Tool, like most of you, has weathered a tough year of ups and downs with very little consistency; however the lights do seem to be getting brighter as business picks up a bit for many of our customers.

## WHAT ARE YOU DOING NOW?

How have you changed your business to take advantage of the 2009 shake-up and the apparent recovery in 2010?

Unique Engineers have been very busy developing new products for the Green Movement and the smaller, leaner businesses we see emerging. The NEW patent pending Go Green Inserter (just released) has been a very big hit, as have some of our NEW compact & efficient machines that come with a low price tag for a quality Unique Machine.

Unique has reduced its inventory of large CNC equipment while remaining on track and focused on the quick moving, efficient entry and mid-level machines. With fast pace lean manufacturing, Unique still meets the customer's needs while trimming many unnecessary expenses of large production runs.

**SALE! Everyone is doing it...** Yet we all have our best employees to retain, margins to meet & remain profitable, all while providing that extra quality service customers expect. Unique has been careful not to devalue its' equipment and services offered. We only place select machines on sale and make the one time deals count strategically. When we run a sale it's a Great Deal that is planned out to yield the most for Unique and our customers. See our Website for more info [www.uniquemachine.com](http://www.uniquemachine.com)

Last and most important, NEW industry targets are being pursued at Unique, with very promising results.

Please tell us what you're doing and how Unique might be able to Help Your Business! Send your update or any questions you may have to [sales@uniquemachine.com](mailto:sales@uniquemachine.com)
